EXPERIENCE

Netsmartz – Associate Software Engineer (CareSmartz360) *Jan 2025 – Present*
Tech: .NET, ASP.NET Core, Dapr, Camunda BPMN, Azure, Microservices, Event-Driven Systems, FHIR

- Migrated EVV integrations for 13 US state aggregators from monolithic architecture to .NET-based microservices, improving fault isolation and enabling independent service deployments.
- Architected event-driven communication using Dapr pub/sub and state stores, enabling scalable, loosely coupled services and resilient inter-service messaging.
- Designed and implemented distributed Clock-In/Clock-Out workflows using Dapr orchestration and Camunda BPMN, ensuring reliable execution of compliance-critical, long-running processes.
- Built idempotent APIs and fault-tolerant event processing pipelines with retry mechanisms, ensuring consistency across distributed systems.
- Developed AI-assisted internal tooling to query workflows, analyze logs, and debug production issues, reducing investigation time for engineers.
- Engineered a lightweight multi-tenant SaaS platform variant, reducing infrastructure overhead and enabling faster onboarding for smaller agencies.
- Integrated healthcare workflows with Azure Health Data Services (FHIR), building scalable pipelines using Azure Functions and Blob Storage for compliant data exchange.

CropHawk – Agricultural Drone Platform (Funded Startup) *Jul 2022 – Dec 2024*
Tech: Python, C++, IoT, Edge ML, Computer Vision, Distributed Systems

- Core engineer in a 1.5 Cr funded AgriTech startup, contributing to end-to-end system design spanning drone hardware integration and backend analytics systems.
- Built autonomous flight and mission planning systems enabling real-time drone navigation and dynamic path adjustments during operations.
- Implemented edge ML pipelines for on-device crop health analysis, reducing latency and enabling real-time decision-making without cloud dependency.
- Designed IoT telemetry pipelines to stream high-frequency sensor and aerial image data to backend services for real-time monitoring and analytics.
- Developed multi-spectral image processing pipelines to detect crop health issues and nutrient deficiencies at early stages.

PROJECTS

Blockchain-based File Storage System
Tech: Blockchain, Hashing, Distributed Systems

- Designed a decentralized storage architecture enabling tamper-proof file integrity and secure verification across distributed nodes.
- Implemented content-addressable storage using hashing techniques for efficient file validation and deduplication.
- Built secure distributed access mechanisms ensuring controlled file sharing and data immutability.

Pathfinding Algorithm Visualizer
textitTech: C++, React, JavaScript, Algorithms, Data Structures

- Developed an interactive system to visualize Dijkstra, A*, and BFS algorithms, improving understanding of graph traversal techniques.
- Simulated real-time pathfinding behavior, demonstrating dynamic node exploration and shortest path updates.
- Enabled performance comparison across algorithms to analyze efficiency under varying conditions.

LEADERSHIP

- Technical Director – CSA Club, JUIT
- Head of IoT and Cybersecurity – ACM JUIT

EDUCATION

B.Tech in Computer Science
Jaypee University of Information Technology *2021 – 2025*
